Examples of ATM Systems

Data Items in Distinct ATM System Journals

System	Recorded Data Item
Flight Data Management System	Take-off/Landing Times
Radar Data Processing System	Trajectory (in Radar Coverage Areas)
Oceanic Data Processing System	Trajectory (in Non-Radar Coverage Areas)
Gate Management & Planning System	Departure/Arrival Times at Gates
Air Traffic Flow Management System	Revised Take-off Times for ATFM (EDCT)

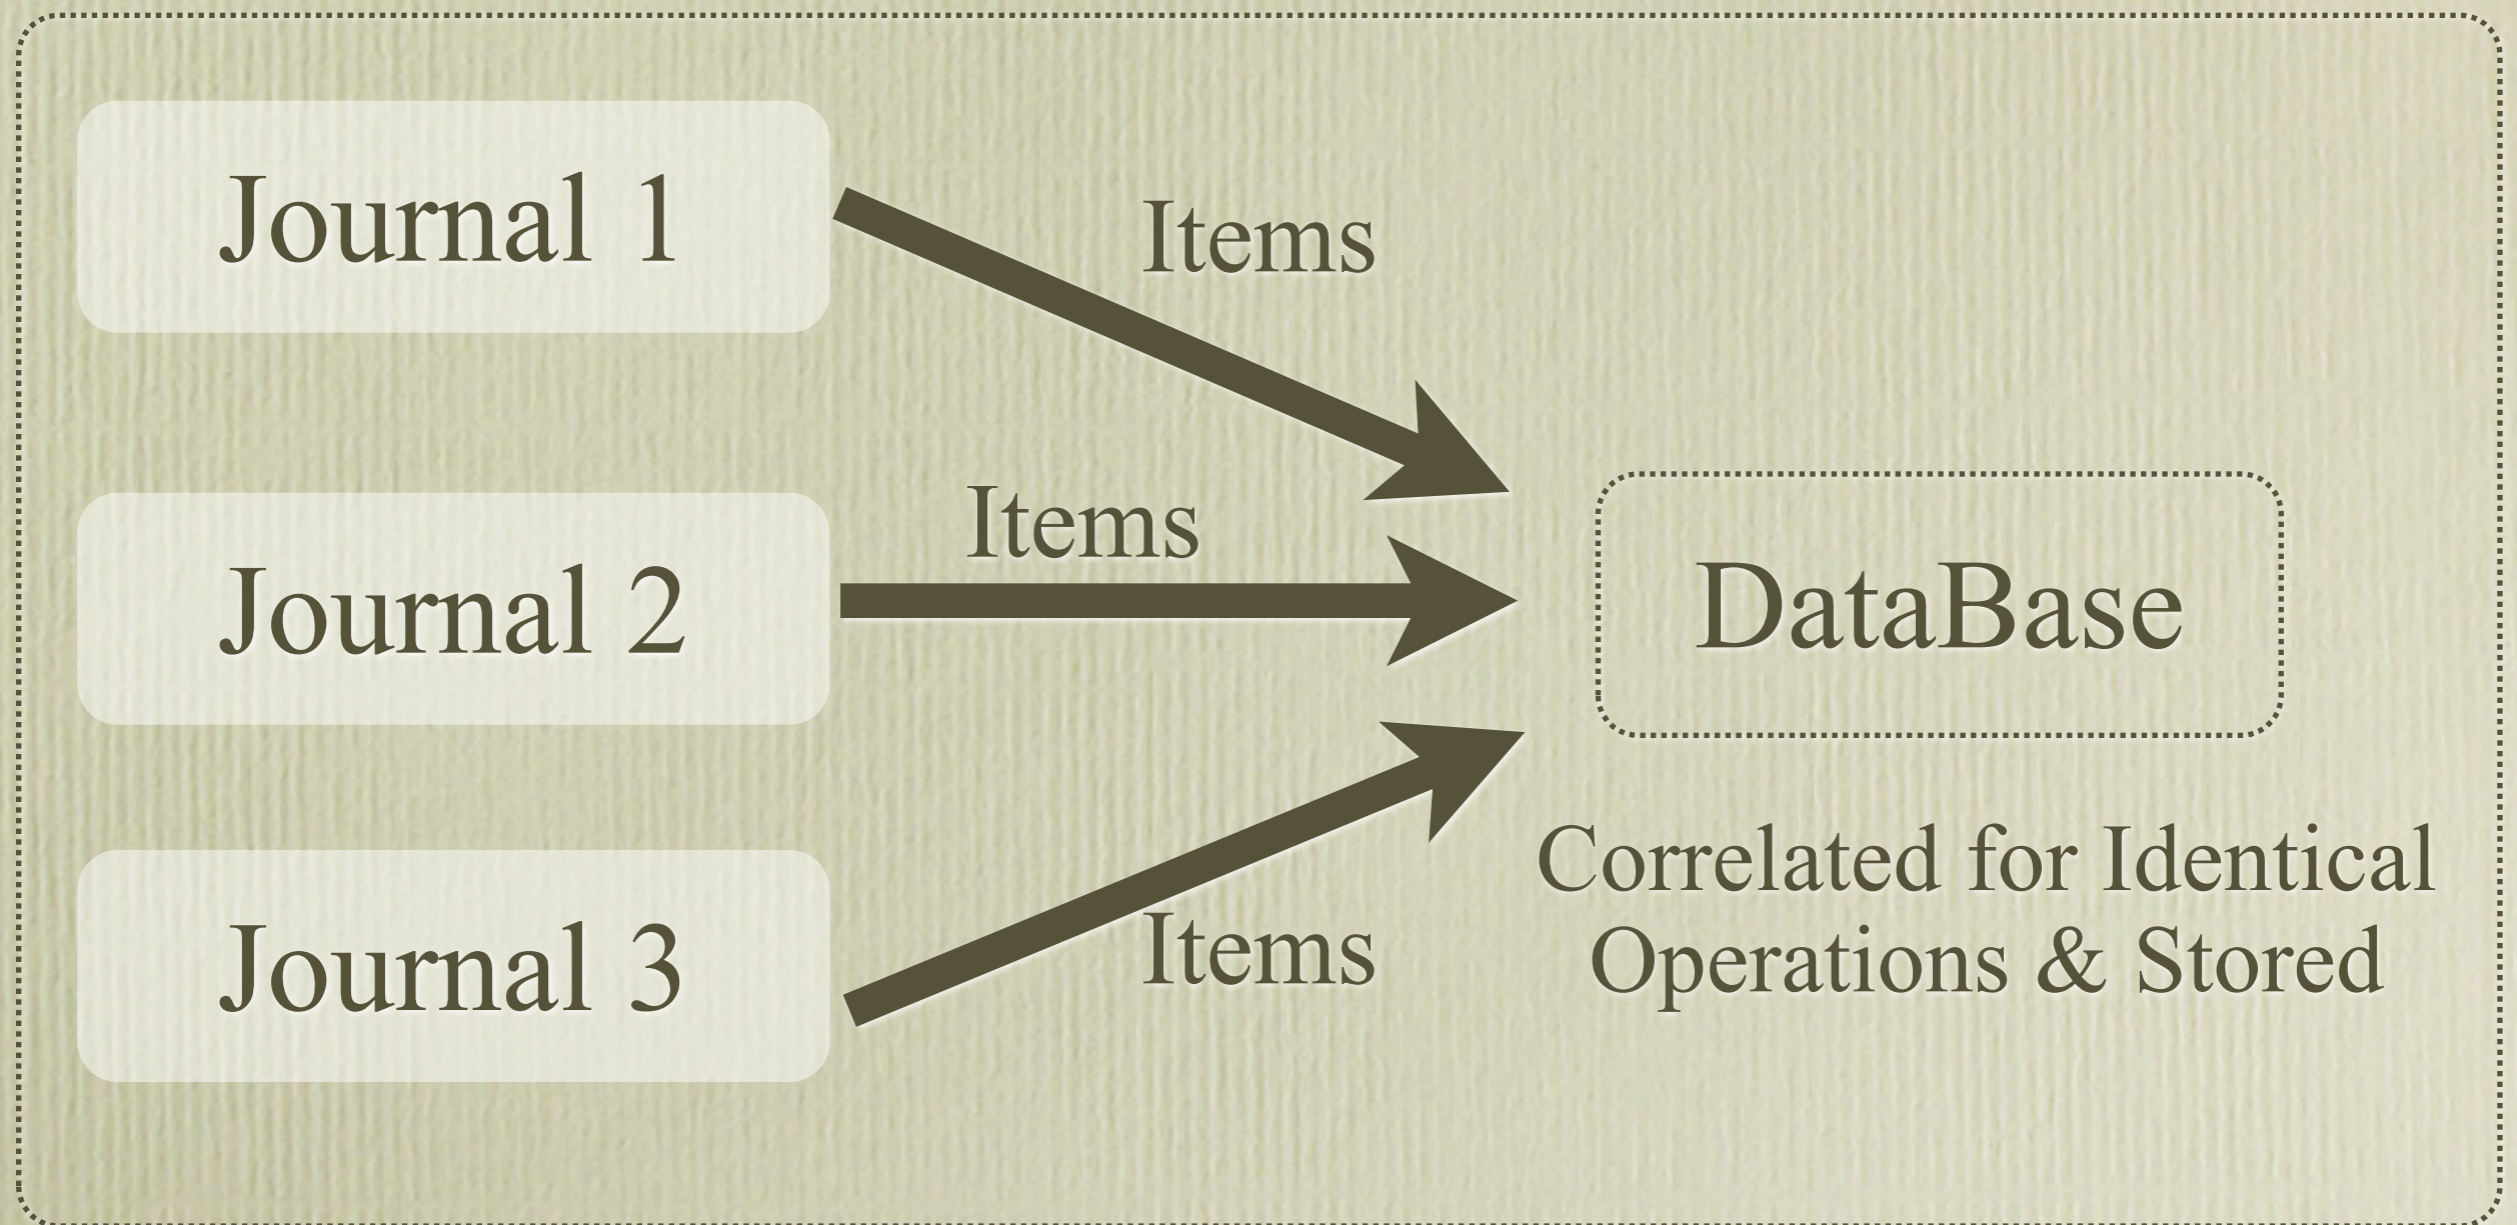

Challenges for Efficient Analysis

- Data Items
 - Correlation for Identical Operations Required
- Substantial Data Volume
 - Due to Traffic Volume Growth & Numbers of Items

Database Implementation

DBMS (DataBase Management System) Exploited

Fast Data Retrieval for the Efficient Computation

Comparison of Arrival Delay

Subject : Delay

- Closely Related to *Efficiency & Predictability* of KPA
 - Important Index for Operational Performance
- Arrival Delay
 - Block-In at the Destination Airports
 - Between Schedule & Actual Time

The Analyzed Data

- 62 Days Worth of Data Gathered

- 2007/2, 6, 8, 10, 12

- 2008/4, 6, 8, 10

- Arrival Delays : Computed at 3 Airports
